TECHNICAL SKILLS

Languages: TypeScript | Java | Swift | Kotlin | Golang | OCaml | Haskell | Scala | Elixir | Python | Dart | C# | C/C++ | Objective-C

Frameworks & Libraries: React | Spring | Spring Boot | Angular | Flutter | GraphQL | Next.js | Node | Svelte | Vue.js | Django | Express

Infrastructure & Tools: AWS | GCP | Terraform | Bazel | Docker | Jenkins | GCR | Kubernetes

Databases & Data Systems: Kafka | Apache Beam | Pub/Sub | Spanner | BigQuery | PostgreSQL | Firebase | MongoDB | Grafana

Domains: Platform | Distributed systems | Enterprise | Mobile | Web | AI | PL | DevOps | Big Data

WORK EXPERIENCE

Software Development Engineer III, Palmetto

2026 – Present | Charlotte, NC

Senior Software Engineer role focused on the Palmetto app and backend services powering home-energy experiences.

- **Built and maintained scalable MERN-stack applications**, developing Node.js, Express, MongoDB, and React solutions for energy insights, electricity usage, grid exports, utility integrations, and energy-trend analytics.
- **Delivered customer-facing features** including marketplace, rewards, recommendations, referrals, and onboarding workflows (utility bills, install requirements, virtual site surveys).
- **Improved reliability and performance** across utility authentication, 2FA, account management, deep linking, push notifications, and cross-platform integrations spanning iOS, Android, and web services.

Platform Engineer, Red Ventures

2024 – 2025 | Charlotte, NC

Enable all RV engineers to serve clients efficiently and effectively using a streamlined internal application development and deployment platform.

- **Designed, prototyped, and developed flexible applications** for common use cases leveraging Terraform to make launching new applications as easy as a few clicks.
- **Monitored live applications and processes through an internal dashboard**, allowing engineers to analyze cost, availability, and other metrics which inform our architecture.
- **Worked with client teams to develop infrastructure** to support their use-cases, allowing future teams to spin up similar projects in minutes.

L4 Software Engineer, Google

2021 – 2024 | Sunnyvale, CA

Designed, from scratch, a distributed system & live integration service to automate tech stack integrations between Google and its acquisitions, saving hundreds of man-hours and ETL software licenses.

- **Led a team of L3 developers & TVCs** to build a high performance, customizable, re-usable, self-service integration platform for all of Google's M&A needs.
- **Built the codebase from the first line of code**, including CI/CD, compute instances, security & role management, data encryption, parallelization, framework development, custom transforms & endpoints, as well as many other development/deployment details.
- **Surfaced useful data and metrics** which inform other parts of Google. Our product is used by many other teams at Google to power their systems, including accounting, HR, Google Cloud, and our acquisitions.

SWE Intern, Google

2020 | Remote

Created an open-source scheduler and roster organizer for Alvin Ailey Dance Company in NYC, building a multi-user full-stack experience shaped closely with clients and stakeholders.

- **Held weekly meetings with clients and stakeholders** to design and refine the product around the company's real scheduling and operational needs.
- **Built custom user interfaces in Angular and TypeScript**, along with the data structures behind workflows like drag-and-drop roster editing, administration tools, and dancer self-service time-off requests.
- **Built the backend in Java with Spring Boot and PostgreSQL**, alongside features such as mobile notifications, automatic roster backup rotations, and collaboration-friendly scheduling flows.

PROJECTS

Cornell Design & Tech Initiative, Developer Lead

As Developer Lead for Cornell DTI, we developed: a ride-hailing app for Disability Services, a course-planner with an automatic major requirement solver (graph-based), an office hours web-app, a study group app for professors with automatic preference matching, web-dev and design courses, an apartment listing app, and more.

JaggerScript, Programming Language

- Designed my own language to practice compiler design. Implemented an interpreter for the web and developed a simple web-based IDE with code examples.
- Try it at jaggerbrulato.com/jaggerscript 🔗

Genetic Learners, Machine Learning

- Designed an interactive demo of agents learning optimal conditions via cost functions in real time with variable, user-defined parameters.
- Try it at jaggerbrulato.com/genetic-ts 🔗
