EDUCATION

BA Computer Science, *Cornell University*
08/2017 – 05/2021 | Ithaca, NY

BA Economics, *Cornell University*
08/2017 – 05/2021 | Ithaca, NY

LANGUAGES

English

Spanish
B2

TECHNICAL SKILLS

Languages: TypeScript | Java | Swift | Kotlin | Golang | OCaml | Haskell | Scala | Elixir | Python | Dart | C# | C/C++ | Objective-C

Frameworks & Libraries: React | Spring | Spring Boot | Angular | Flutter | GraphQL | Next.js | Node | Svelte | Vue.js | Django | Express

Infrastructure & Tools: AWS | GCP | Terraform | Bazel | Docker | Jenkins | GCR | Kubernetes

Databases & Data Systems: Kafka | Apache Beam | Pub/Sub | Spanner | BigQuery | PostgreSQL | Firebase | MongoDB | Grafana

Domains: Platform | Distributed systems | Enterprise | Mobile | Web | AI | PL | DevOps | Big Data

WORK EXPERIENCE

Staff Forward-Deployed Engineer, *H2 Corporation*
2026 – Present | Remote

Staff engineer leading frontend architecture and development of a purpose-built, AI-native construction platform centered around an infinite-canvas interface.

- **Architected and developed a scalable infinite-canvas interface** for construction plans, supporting detailed annotations, markup, and human-in-the-loop review and editing.
- **Integrated custom computer vision models into core application workflows**, including object detection, optical character recognition (OCR), and context-aware object classification.
- **Worked directly with the client as part of a forward-deployed engineering team**, translating domain-specific requirements into product features and driving development from initial design through implementation, QA, and delivery.

Software Development Engineer III, *Palmetto*
2026 | Charlotte, NC

Senior Software Engineer role focused on the Palmetto app and backend services powering home-energy experiences.

- **Built and maintained scalable MERN-stack applications**, developing Node.js, Express, MongoDB, and React solutions for energy insights, electricity usage, grid exports, utility integrations, and energy-trend analytics.
- **Delivered customer-facing features** including marketplace, gamified rewards, recommendations, referrals, and onboarding workflows (utility bills, install requirements, virtual site surveys).
- **Improved reliability and performance** across utility authentication, account state, energy history/statistics, and cross-platform integrations across iOS, Android, and web clients.

Platform Engineer, *Red Ventures*
2024 – 2025 | Charlotte, NC

Enable all RV engineers to serve clients efficiently and effectively using a streamlined internal application development and deployment platform.

- **Designed, prototyped, and developed flexible applications** for common use cases leveraging Terraform to make launching new applications as easy as a few clicks.
- **Monitored live applications and processes through an internal dashboard**, allowing engineers to analyze cost, availability, and other metrics which inform our architecture.
- **Worked with client teams to develop infrastructure** to support their use-cases, allowing future teams to spin up similar projects in minutes.

L4 Software Engineer, *Google*
2021 – 2024 | Sunnyvale, CA

Designed, from scratch, a distributed system & live integration service to automate tech stack integrations between Google and its acquisitions, saving hundreds of man-hours and ETL software licenses.

- **Led a team of L3 developers & TVCs** to build a high performance, customizable, re- usable, self-service integration platform for all of Google's M&A needs.
- **Built the codebase from the first line of code**; including CI/CD, compute instances, security & role management, data encryption, parallelization, framework development, custom transforms & endpoints, as well as many other development/deployment details.
- **Surfaced useful data and metrics** which inform other parts of Google. Our product is used by many other teams at Google to power their systems, including accounting, HR, Google Cloud, and our acquisitions.

PROJECTS

Cornell Design & Tech Initiative, *Developer Lead*
As Developer Lead for Cornell DTI, we developed: a ride-hailing app for Disability Services, a course-planner with an automatic major requirement solver (graph-based), an office hours web-app, a study group app for professors with automatic preference matching, web-dev and design courses, an apartment listing app, and more.

OJaml, *Programming Language*
- Designed OJaml, an ML language, to explore compiler design. Implemented polymorphic type checking, first-class functions, and WebAssembly execution with a browser-based IDE.
- Try it at jaggerbrulato.com/ojaml

LiveBoard, *Distributed Collaborative Whiteboard*
- Designed LiveBoard, a distributed collaborative infinite-canvas whiteboard with real-time sync, Redis-backed fanout, durable PostgreSQL state, transient previews, shared undo/redo history, live cursors, file management, access control, grouping, transforms, and more.
